

Retail Analysis Dashboard - Detailed Project Report

1. Overview

This Power BI dashboard provides a complete analytical overview of retail operations, covering orders, delivery status, product categories, and geographical distribution. It is designed to help business managers, analysts, and decision-makers track performance trends and optimize supply chain processes.

2. Key Metrics

- **Total Orders:** 294K
- **Total Delivered:** 127K (43.29% growth)
- **Total Shipped:** 63K (21.53% growth)
- **Total Processing:** 56K (18.84%)
- **Total Pending:** 48K (16.24%)

These KPIs display current operational performance, efficiency, and order pipeline health.

3. Total Orders by Month

The monthly trend line visual highlights fluctuations in order volume throughout the year. January shows the highest spike, followed by a dip in February, and steady performance throughout summer and winter.

4. Product Category Analysis

A donut chart categorizes orders across five main product categories:

- Electronics – 23.6%
- Grocery – 22.16%
- Clothing – 18.01%
- Home Decor – 18.13%
- Books – 18.11%

Electronics and Grocery form the largest segments.

5. Geographic Distribution

A map visualization shows total orders across states in North America. States with higher order

volumes are represented with larger blue markers. This helps identify regional demand patterns.

6. Order List Table

A detailed tabular breakdown displays order details including:

- Order ID
- Customer Name
- Location (State, Country)
- Product Category
- Brand
- Status (Delivered, Processing, Pending)

This helps operational teams track and manage individual orders efficiently.

7. Insights & Recommendations

- Electronics category shows strong performance — consider expanding inventory and marketing.
- States with low volumes may benefit from targeted promotional campaigns.
- High pending and processing orders suggest operational bottlenecks — improving warehouse workflow may decrease delays.
- Seasonal order spikes should be analyzed further for supply chain planning.

8. Conclusion

This Power BI dashboard provides a comprehensive and visually rich representation of retail business performance. It enables quick decision-making through clear KPIs, trend analysis, category insights, and geographic visualizations. The structured analytics help drive operational efficiency and strategic planning.
